

SYNOPSIS

(NEWS WEBSITE)

A Web Design is a term widely used to create a website using the principles of web design and following various steps to meet the objectives of the client and the designer respectively.

Web design is based on the planning and creation of websites ,which includes site structure ,layout ,navigation ,fonts ,image ,colors etc .In other terms focused on creating the front end of a web page.

Format to design a website:

Static website designing-Static website is written in plain HTML format and designing a search engine friendly website .Static website provides interactive information for product and services.

Dynamic website designing-Dynamic websites utilizes a server side scripted language such as ASP ,PHP etc.Dynamic website content requires online database,e-business etc.

Flash website designing-is creating an innovative,interactive animation, website navigation,animated logos or the whole flash website using a flash website designing.

Types of website to design:

- Personal website
- Bussiness website
- Informative website
- E-commerce website
- Photo sharing website
- Blogs

Useful tips to improve website usability:

- Focus on the website user's needs
- Programs using CSS

- Use a clear ,simple navigation

This project “News website” is based on the idea of informative website and will be developed using *HTML,CSS* and *JAVASCRIPT*. The main objective of developing this project was to create a static website for news, from where user can get the details of the news,such as place,date,time etc.

This project is in HTML and CSS so it’s a static website and does not perform any type of dynamic database operations.

In this website we will take news from different news channel website and the connect them in one website using html tags.So it will become easier for the user to find news according to its preference such as language,channel etc.

For an website the most important thing is its appearance and designing because if it will not be attractive then people will not get interest to the site and read.So our first preference in this even will be the designing.

SOFTWARE USE :-

- TEXT EDITOR(NOTE PAD)
- WEB BROWSER(GOOGLE CHROME)

HARDWARE USE:-

- COMPUTER/LAPTOP(ASUS VIVOBOOK)

Having enough specifications to be used to create a website.The most important specification to check on the computer should be size of RAM.

Here we used 2GB ,this will ensure that the computer runs quickly and smoothly, even with heavier programs such as website.

- INTERNET

In order to create a website ,access to a high-speed internet connection can be vital. This allows you to transfer the files that will make up your website.

- External hard drive

We should always keep a fairly current backup of your website in case there is an issue where the site crashes or files become corrupted. So for that we need to keep a backup on a external harddrive.
